908-502-1989 | kimeunb1822@gmail.com | [linkedin.com/in/kimeunb](https://www.linkedin.com/in/kimeunb)

**Software Engineer | Backend & Full-Stack | Data Pipelines, System Integration & Reliability | Java, Python, SQL, React**

## WORK EXPERIENCE

---

### General Motors — Software Engineer

Atlanta, GA | Jun 2021 – Jul 2026

*Enterprise Application Integration (EAI) — Automation Team*

- Designed and built backend services and full-stack automation that orchestrate request processing across multiple systems and partners (new, modify, restore, authentication-update, incremental-update, and decommission workflows) using **Java, Spring Boot, REST APIs, Angular, and PostgreSQL**, reducing manual request-processing effort by ~90%.
- Built and integrated **data pipelines and request-fulfillment flows** across APIM and MFT platforms, reconciling state across systems and standardizing intake, validation, and handoffs; drove 90%+ adoption of automated workflows across application teams.
- Migrated 100% of legacy APIM workflows and ~80% of MFT workflows from Galileo and custom applications into standardized, maintainable platform-native solutions (ServiceNow catalog items, Flow Designer, GlideAjax, client/server-side scripts, form validation).
- Partnered with product owners, platform teams, and business counterparts to translate ambiguous requirements into well-scoped, well-tested, extensible solutions and clear release documentation.
- Implemented **Azure DevOps CI/CD pipelines**, release validation, and deployment practices to ship features to production at enterprise scale across production and pre-production environments.

*Enterprise Application Integration (EAI) — Site Reliability Engineering (SRE) Team*

- Owned **monitoring, alerting, and on-call reliability** for enterprise platforms (APIM, IBM Sterling MFT, Layer7, DataStage) through production troubleshooting, incident analysis, and observability improvements.
- Built an automated **monitoring and alerting system** for platform operations using **Python and Jenkins**, reducing repetitive manual review and improving issue-triage and incident-response efficiency by ~80%.
- Created and monitored operational metrics, escalated incidents, and supported “keep-the-lights-on” efforts to maintain availability of production systems.
- Recognized with an **Exceeded performance rating** for high-impact automation, platform reliability, and integration improvements.

### Student Side Inc — Software Engineer Intern

Kenilworth, NJ | Jun 2020 – Nov 2020

- Designed SQL schemas and optimized queries supporting product features, authentication, and subscription workflows.
- Developed user authentication, email verification, and paywall features using **Node.js, React, and PostgreSQL**.

## PROJECTS & RESEARCH

---

**CustodyAI Assistant — AI Co-Parenting Document Assistant** | Python, FastAPI, React, Azure OpenAI, Docker, OCR (RAG)

Live: [custody-ai-assistant.vercel.app](https://custody-ai-assistant.vercel.app) | Code: [github.com/kimberly-smart/custody-ai-assistant](https://github.com/kimberly-smart/custody-ai-assistant)

- Built a **retrieval-augmented (RAG) document assistant** that ingests custody-related PDFs (incl. **OCR for scanned docs**), answers questions with **source-grounded citations**, summarizes documents, and rewrites emotional messages into calmer communication—built with **Python, FastAPI, React, Azure OpenAI, Docker**; deployed full-stack on Render + Vercel.

**AI/NLP & Data Analytics Research** | Python, data analysis, embeddings, NLP

- Conducted AI/NLP and data-analytics research with presentations at IEEE MIT, GMIS, and NCUR; published in the International Journal of Machine Learning and Computing (May 2020).

## TECHNICAL SKILLS

---

**Languages & Frameworks:** Java, Spring Boot, Python, SQL, JavaScript/TypeScript, React, Angular, Node.js, REST APIs

**Backend & Data:** Backend services, data pipelines, system integration, event & batch processing, API integrations, workflow automation, reconciliation, validation logic

**Databases & Platforms:** PostgreSQL, relational database design, SQLite, APIM, Layer7, IBM Sterling MFT, DataStage, ServiceNow

**DevOps & Reliability:** Git, Azure DevOps, Jenkins, CI/CD, release validation, monitoring, alerting, observability, on-call, SRE practices

**AI-Assisted Development:** Agentic coding tools, LLM integration, embeddings

## EDUCATION

---

**Kean University** — M.S. Information Systems (2021); B.S. Computer Science (2020)
